

Plain Language Statement for the questionnaire

Title: “Technostress and digital resilience in translator and interpreter education”

Principal investigator:

PI: Dr Joss Moorkens, joss.moorkens@dcu.ie; School of Applied Language and Intercultural Studies, Dublin City University

Research Team:

Prof. Dr. Ralph Krüger, TH Köln – University of Applied Sciences, Germany

Email: ralph.krueger@th-koeln.de

Prof. Dr. Erik Angelone, TH Köln – University of Applied Sciences, Germany

Email: erik.angelone@th-koeln.de

Dr Nora Aranberri, University of the Basque Country (UPV/EHU), Spain

Email: nora.aranberri@ehu.eus

Dr María Isabel Rivas Ginel, UCLouvain, Belgium

Email: isabel.rivasginel@uclouvain.be

What this research is about.

This research looks at the experiences of university lecturers who teach translation and related subjects. It focuses on how new technologies, such as CAT tools, machine translation and AI systems, are used in teaching. We are interested in both the opportunities these technologies offer and the challenges they create, such as increased workload, complexity, or uncertainty. The goal is to better understand current teaching practices and help improve training in translator and interpreter education.

Why this research is being conducted.

There is still limited research on how lecturers experience rapid technological change in translation teaching. We want to understand what works well and what is more difficult when using these technologies in the classroom. By collecting this information from lecturers, we aim to share useful insights that can support better teaching practices and curriculum development.

What you will be asked to do.

If you choose to take part, you will complete an anonymous online survey about your teaching experience. The survey will take around 20–25 minutes.

How your privacy will be protected.

The survey is anonymous. You will not be asked for your name or other identifying information. Any technical data automatically collected by the survey platform (such as IP addresses) will be removed before analysis. Your answers will not be linked to you in any way. Only the research team will have access to the data.

Personal data and GDPR.

We do not actively collect personal data. Any automatically collected technical information will be removed before analysis.

How your data will be used and stored.

Your responses will be stored securely in a protected DCU Google Drive folder. Only the research team will have access. All data will be deleted by September 2028.

Limits to confidentiality.

We will do our best to keep your data confidential. However, in rare cases, the law may require us to share data (for example, if required by a court). If this happens, we will only share what is strictly necessary.

Benefits of taking part.

By taking part, you will help improve understanding of how technology is affecting translation teaching. Your input may help improve teaching practices and training programmes in the future.

Risks of taking part.

There are no expected risks. However, if you feel uncomfortable while answering the survey, due to the nature of the questions being asked in relation to technology-related stress and uncertainty, you can stop at any time.

In the event that you experience any discomfort or other issues in this regard, we encourage you to visit <https://findahelpline.com/>, where you can find country-specific resources in terms of support and guidance.

Your right to withdraw.

Taking part is completely voluntary. You can stop the survey at any time before submitting it. Once the survey is submitted, your responses cannot be withdrawn because they are anonymous. If the survey platform temporarily stores partial responses before submission, participants may stop participation at any time. However, once responses are submitted anonymously, withdrawal of data may no longer be possible because responses cannot be linked to individuals.

How to find out about the results.

The results will be shared through academic publications and presentations. If you wish to receive updates about the results, you may contact any of the researchers via email; this will not be linked to your survey responses.
